 - ◆ Purchase history
 - ◆ Price changes
 - ◆ Order log
 - ◆ Staff alert

Designed
to fit
your
hand and
your
budget

The ULTI-MATE mobile computing solution will allow you to redefine boundaries in store management procedures. PT-MATE provides the ability to perform a wide range of tasks without being tied to a computer workstation. It will be an invaluable asset to your store.

NEW

CONCEPTS IN MOBILE COMPUTING

PT-MATE is a sophisticated software package designed to make full use of the latest technology in windows based hand-held PDA terminals. PT-MATE has been specifically designed to perform ALL stock management tasks based on information stored in the PDA, whilst also offering the additional benefits of wireless comms. This ensures the ability to perform time critical jobs such as ordering or stocktake even when the computer system is out of action. PT-MATE is designed to operate on advanced Wireless Networking Technology (802.11b) providing enhanced functionality to access data in the back office computer system to answer questions that you need to know RIGHT NOW.

MOBILE REGISTER

PT-MATE mobile register introduces new concepts in enabling pre-scanning of items to help cope with peak periods when the POS checkout registers may not be able to handle the workload. If a POS lane is out of action, PT-MATE may be used to scan items, display prices and total the sale, completely independent of the computer network. Alternatively, PT-MATE may be utilised as a Que-Buster to scan items in a fast-lane operation. The sale details are transferred to a POS lane for finalisation as soon as the sale that is in progress is completed. Enjoy piece of mind with the knowledge that you can handle any crisis situation that may arise at point-of-sale.

STOCKTAKING

PT-MATE makes stocktaking just so easy, providing immediate display of product descriptions to confirm item identity. Additional information is readily available - current and alternate suppliers, cost and sell prices, purchase history, and most importantly the quantity already counted. Special features include handling of multiple sites and shelf locations.

MESSAGING

PT-MATE is your ULTI-MATE communication device. The wireless network provides instant access to data transmitted from the computer, as well as the ability to signal a response. Instant messages are provided to announce important events as they occur.

ORDERING

PT-MATE removes any uncertainty associated with order preparation, by immediate confirmation that the item is on file. The system gives instant answers to questions relating to pricing, stock on hand, sales history, previous orders - in fact anything you wish to know about products to make better decisions when ordering.

SHELF AUDIT

PT-MATE is the ULTI-MATE solution for price checking on the shop floor. Just scan any barcode and the PT-MATE CHECK-AND-CORRECT feature will instantly confirm product identity, current price, promotions, stock on hand, and all details relating to ticket compliance. Instantly update information in the back office PC by wireless comms. Price corrections as well as label requests are updated immediately.

STOCK MOVEMENT

PT-MATE is the ULTI-MATE solution for controlling all movement of stock items. eg. Receiving goods on the loading dock and checking against purchase order, listing and costing damaged stock and accounting for items transferred to another location. Simply scan the barcode, enter the quantity and PT-MATE builds a complete audit trail of all stock movements. No problem with multiple locations and inter-store transfers.
